

Legend

Estimated Inundation Area of Tennou River (Inundation Depth)
 Source: Fukui Prefecture
 Report on Areas in Potential Danger of Landsliding Disaster

- Less than 0.5m
- 0.5m - under 1.0m
- 1.0m - under 2.0m
- 2.0m - under 3.0m
- 3.0m - under 5.0m

Areas in Potential Danger of Landsliding Disaster
 Source: Fukui Prefecture
 Report on Areas in Potential Danger of Landsliding Disaster

- Area in Potential Danger of Steep Slope
- Area in Potential Danger of Mud and Rocks Flooding

Approximate ground level difference between Municipal Office and each shelter is shown.
 (Ground level of Municipal Office to be "0")

- First Shelter / Base Shelter
- Police Station
- Fire Station
- Facility for People who Need Assistance in Disaster
- Heliport
- Public Facility
- Water Level Observation Point
- Rain Observation Point
- Drain Pump Station
- Major Flood Prevention Area

How to Read Inundation Depth Caused by Water Disaster in Tennou River

Depth	Approximate Inundation Level	Evacuation Actions to be taken
3.0~under 5.0m	Below the Eaves of Second Floor	How to the third floor or higher?
2.0~under 3.0m	Evacuation of the second floor	Quickly evacuate to the shelter or other refuge facility?
1.0~under 2.0m	Below the Eaves of First Floor	How to the second floor or higher?
0.5~under 1.0m	Waist level of a Man	Quickly evacuate to the shelter or other refuge facility!
Less than 0.5m	Knee level of a Man	Rocks evacuation is rather dangerous!

About the flood hazard map

This hazard map has been developed to provide various information when Tennou/Wada River bank is burst or overflow by the increased river water due to heavy rainfall. This includes the estimated inundation area and depth, and the information on designated shelter, based on the predictions of flooding. Please be aware that this map is for referential use and actual conditions in case of disaster may differ from what are described here. Note the following points when you use this map for evacuation.

- Note that inundation or landsliding such as flooding of mud and rocks can occur at any places that are not predicted in this map. Pay attention to the state of river or inundation around your house on a regular basis, and evacuate at an early stage when you sense the danger.
- Fill in the evacuation route from your house to the recommended shelter and the contact information of your family members in this map, and keep it around your home for an emergency.
- Make a quick evacuative action in accordance with this map when the flood danger is fast approaching and the evacuation information (Evacuation Preparation Information, Evacuation Advice or Evacuation Order) is issued by Echizen Town.

Base Shelter

Facility Name	Address	Phone	First Floor Level
Asahi Elementary School	5-7 Tennou	34-0031	0.75m
Asahi Junior High School (Open April 2008)	51-51-1 Kihisyo	34-0061	1.20m
Echizen Town Asahi Municipal Gym	58-85-1 Kihisyo	-	0.75m
Asahi Life Learning Center	13-19-3 Uchigouri	34-2000	0.00m
B&G Gym	22-35 Asahi	34-2229	0.90m
Asahi Labor Gym	18-16-5 Uchigouri	-	0.55m
Echizen Town Municipal Library	2-210 Nishi-Tanaka	34-0395	0.20m
Tokiwa Elementary School	20-9 Aono	34-1374	0.60m
Nyu High School	41-18-1 Uchigouri	34-0027	0.50m

Inundation caused by predicted flooding of Tennou River

- Estimated rainfall required per day 187.6mm. This is equivalent to the heavy rainfall that may occur once every 50 years approximately. (Rainfall is estimated with reference to the past rainfall that has caused the worst disaster.)

Facility for people who need assistance in disaster

Facility Name	Address	Phone
Asahi Central Nursery	19-20-1 Nishi-Tanaka	34-0081
Asahi Northern Nursery	1-5 Tennou	34-1762
